

**Ready-to-Press tungsten carbide powders** are free flowing powders ready to use as starting materials in the production of cemented carbide. Grand sea Cemented Carbide designed and manufactured numbers of custom grades for owing producing and selling. We can provide all kinds of Ready-to-press powder in the specifcation table.

In our grades, we use inhibitors such as VC, CrC, TaC, TaNbC, NbC, TiC with cobalt, nickel and iron binders. We have produced different variations ranging from micrograin to ultracourse straight grades to complex alloy grades.
